Galderma Sunscreen Challenge

About Galderma

Galderma, founded in 1981, is a global leader in dermatology, dedicated to advancing the future of dermatological care. The company operates across three core business segments: Injectable Aesthetics, Dermatological Skincare, and Therapeutic Dermatology. With a mission to enhance the quality of life for individuals through innovative solutions, Galderma's portfolio spans premium brands that cater to the unique needs of diverse skin types and conditions. As the only truly scaled, pure-play dermatology company, we are driven by the opportunity to go back to our roots and reaffirm our purpose :

Refining and reinforcing this purpose has made Galderma a formidable force in the world of dermatology. Galderma has several brands that cater to unique skin needs that are trusted by dermatologists, patients and consumers the world over.

Galderma offers a synergistic portfolio of flagship brands with leading market positions in their respective product categories, supported by science-based product differentiation and premium positioning.

The Indian Sunscreen Opportunity

The Indian sun care market is witnessing rapid growth, driven by an increasing awareness of skin health and the evolving beauty aspirations among younger consumers. This is further augmented by rising disposable incomes and social media influence.

At the same time, the category is highly dynamic, with continuous innovation through:

- New formats: serums, gels, sticks, mists, cushions
- Enhanced benefit claims: anti-pollution, brightening, oil control, skin barrier support
- Superior sensorial experiences designed for Indian weather conditions
- Premium, portable, and aesthetically appealing packaging

Despite its strong dermatological credentials, Galderma has a limited sunscreen portfolio across its Cetaphil and Biluma brands. While its existing offering delivers trusted protection, its format and sensorial experience may not fully meet the evolving needs of young Indian consumers, especially in hot and humid climates.

This leads to a critical strategic question:

How can Galderma build a winning sunscreen portfolio for India's next generation of consumers while leveraging its existing brand heritage?

The Challenge

Your team has been appointed as strategic consultants to Galderma India.

Your task is to develop a future-ready sunscreen portfolio strategy for Indian consumers aged 25–35 years across its existing brand portfolio. Based on a deep understanding of this cohort, recommend a comprehensive portfolio strategy that enables Galderma to win in this fast-evolving category.

Key Considerations :

1. Consumer & Category Deep Dive

Your team needs to build a holistic understanding of the Indian sunscreen consumer (25–35 years) including :

- Category awareness, attitudes, motivations, and barriers
- Consumer journey, usage occasions, routines, and unmet needs
- Brand landscape, loyalty dynamics, and drivers of choice and switching
- Product, format, benefit claims, and packaging preferences

2. Competitive Landscape Assessment

In order to make a mark, your team also needs to analyse the competition closely across mass, premium, and derma-cosmetic segments.

Also, identify category white spaces and sources of competitive advantage

Expected Deliverables :

- Develop a 3–5 year portfolio strategy that includes recommended product formats, SPF architecture, key benefit claims, differentiating ingredients and formulations, pack formats and sizes, pricing strategy, and a clear portfolio hierarchy that defines the role of each SKU.

Ensure this portfolio both leverages and complements the existing skincare range.

- Identify key communication channels and territories, key channels and partnerships and strategies to drive trial, adoption, and repeat usage
